About Us

The BST is a supplier of rubble of various fractions and rocks and other inert materials for the construction of hydraulic structures. The objects of our construction are ports, marinas, shore protection structures.

The BST company – is a reliable partner in the construction of hydraulic structures. For us, every object is a step in consolidating relations with Customers. We are focused on long-term partnership.

We are proud that Clients have entrusted us with the construction of hydrotechnical construction of the Cargo port of Sochi (imeretinskiy port), Sea port of Sochi, as well as many other interesting objects. We try to match the rendered trust and to be a reliable partner.

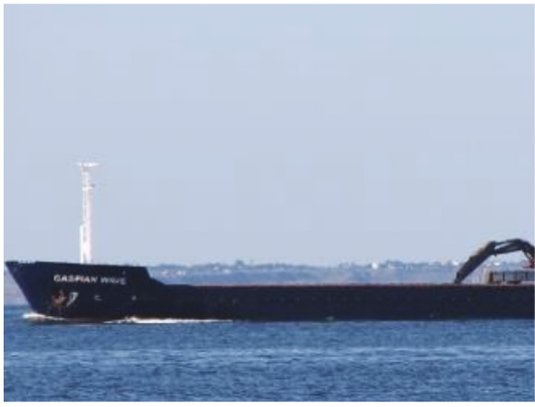

THE ADVANTAGE OF

THE COMPANY

Our competitive advantage is that we do not just supply materials, but also put it in the design position, including raids on open ports, which saves the Customer time and money. We have extensive experience in the production of works in the open sea.

We operate large fleets of specialized ships: dump split of the barge, plasmapause self-propelled barges, self-unloading vessels bilge.

In the framework of

2010-2015, in which participated
the company BST was delivered
and laid in the design position of
crushed stone and rubble stone
of various species and factions more than

1.550.000 tons.
